

SYNOPSIS

Mission: Zero Emissions - The Factory of Tomorrow

Auftrag: Zero Emission - Fabrik der Zukunft

Over the course of several months they observe fascinating pilot projects as particularly innovative production processes are designed and implemented. The film documents the history of how these projects came about, reports on research progress and setbacks, and shows the hopes of the researchers and the potential of the new technologies. Numerous examples demonstrate how the factory of the future is already working today. How can fossil fuels be replaced by renewable sources in future? How might an industrial and working environment where production is sustainable look in around 50 years' time? What do the factory of the future's eco-intelligent products - products that are produced and used in an eco-friendly way, yet which are still competitive - look like?

Year: 2011

Run-Time: 1 x 43 min.

Directed by Claudia Giczy and Peter Giczy

A co-production of ORF/3sat and Claudia Giczy

Available worldwide

Languages: German (ORIGINAL) , English (DUBBED)

Format: 16:9 , 16:9
