

SYNOPSIS

Time Limits

Die Grenzen der Zeit

We perceive time in terms of seconds - the length of a heartbeat. We can't even imagine events that unfold over several days and years or be aware of elementary particles that flash into existence for less than a billionth of a second without high-tech camera equipment and exceptional filming techniques. «Time Limits» uses a combination of dramatic computer animation, amazing real time images and the latest scientific advances to give a totally new view of our world and our universe. Specially developed motion-control time-lapse photography will bring to life the slow motion world of plants and the beautiful play of day and night. As the journey continues we experience shorter timescales to find elements that exist for less than a millionth of a second diving into a world of its own. Experience events in a completely new visual way and join the team that made «Limits of Perception» such a success on a fascinating journey to the limits of time.

Awards: Missoula International Wildlife Film Festival 2008: Missoula International Wildlife Film Festival Award

Year: 2008

Run-Time: 1 x 49 min.

Directed by Steve Nicholls, Alfred Vendl
