

SYNOPSIS

Electricity from the Sun - Photovoltaics Worldwide

Strom aus der Sonne - Fotovoltaik weltweit

The market for solar power is experiencing a world-wide boom. What are the options this new technology has made possible? What opportunities does it provide both to our countries and developing nations? Can solar energy help to address climate change and solve the energy problem? Using first-class pictures and computer animation of superb educational standard, the film casts a glance at the *status quo* from technological, economic and social points of view.
