

# SYNOPSIS

## Natural Home - Ecological Construction

### Die Natur im Haus - Ökologisches Bauen

Housing that does without heating systems or mud houses constructed using the material excavated at building sites - »Ecological construction« is in and brings a new meaning to the buzzword »sustainability«. According to the latest calculations buildings account for an unbelievable 50% of energy use. As a result world-wide CO2 emissions are on the increase. At a time when everyone is talking about the financial crisis and global warming building ecologically would seem to be the order of the day. In the meantime designers and architects have also jumped on the bandwagon and are collaborating intensively with famous property developers to increase the attraction of passive construction. This documentary shows outstanding »Eco-Houses« which are also optically convincing and whose unused building material can be reprocessed in an environmentally friendly way.
