

SYNOPSIS

Our Knowledge is But a Drop - Water, the Unknown Element

Unser Wissen ist ein Tropfen - Wasser, das unbekannte Wesen

Water - just a liquid or much more? New analyses of this life giving substance have caused a sensation around the world. Many researchers are convinced that water is capable of storing information and retrieving it. This documentary looks at water's «memory» and attempts to find out what scientific surprises still lie in store from worldwide research into this area. Scientists have found out, for example, that water can store measurable information - even without any contact. Bacteria can also assess changes in water, a thousand times more precisely than any physical or chemical measuring instruments. The possible applications are innumerable: limitless retention and storage capacity and the key to discovering the origins of life on our planet. One thing is clear - research into water is just at the beginning.

Year: 2008

Run-Time: 1 x 43 min.

Directed by Hans Kronberger and Gundi Lamprecht

Uranus in co-production with ORF/3sat

Available worldwide
